# LGA 1851

# CPU CONTACT FRAME INSTALLATION INSTRUCTIONS

Open ILM
lift the ILM lever to unlock (CPU remains in socket).

Remove ILM — loosen the 4 ILM screws
with the wrench and lift the ILM off; keep the motherboard screws for reuse (no screws included).

Seat Frame
align the Frame over the CPU and backplate studs; lower gently.

Hand-thread screws
thread each screw by hand until snug.

*Tightening order: 1>3>2>4

Tighten (star pattern)
use the wrench to tighten diagonally until firm and the Frame sits flat; do not overtighten.

TIPS & CAUTIONS

· Work in a static-free area to prevent component damage.

· Never force the frame into place — realignment is safer than pressure.

· If you feel resistance, recheck your alignment before proceeding.

· Do not overtighten the screws — it may stress or warp the socket area.

· Always move to the screw opposite (diagonally) from the one you just tightened.
